Russian	native
English	basic · technical reading

SUMMARY

Full-stack developer with a frontend focus and 3+ years of experience. Strong in **responsive, pixel-perfect layout** from designs (HTML / CSS / SCSS, Bootstrap, Blade) and building interfaces with **Vue 3**; on the backend I work with **Laravel / PHP** — REST APIs, payment & CRM integrations, databases and deployment. Contributed to 40+ commercial projects: CMS/CRM platforms, portals, chats, mobile and desktop apps. I use AI tools (Claude Code) deliberately, with a clear process: **analyze the task** → **plan** → **generate code**. I fully understand and control the result, not relying on blind generation.

EXPERIENCE

Frontend → Full-stack Developer

Oct 2025 — Present

EQUATOR · Remote

- ▶ Grew **from client-site layout to full-stack** development of the **O-Live** platform (healthy-food subscription, **Laravel 12**): the whole frontend plus backend — admin panel (meals, menu calendar, plans, orders), API and database.
- ▶ Delivery-zone map on **Leaflet**: polygon editor in the admin panel, address geocoding (Yandex) and in-zone validation.
- ▶ Integrations: **Halyk ePayment**, **WhatsApp OTP** verification (Green API), order & deal sync with **Bitrix24**.
- ▶ Marketing analytics: server-side offline conversions to Yandex.Metrica and **Facebook Conversions API**, Amplitude, cohort analysis of renewals.
- ▶ Engine for **AI-generated landing pages** (A/B versions, metrics) and a Reports API for AI-assistant integration.
- ▶ I **ship releases to production** myself: deployment, environment config, log checks.
- ▶ Joined **client calls** together with the Project Manager: demoing the product and discussing tasks.

Web Layout → Frontend Developer

Apr 2023 — Oct 2025

IT Group Kazakhstan · Remote

- ▶ **Responsive layout from designs** for 40+ projects: HTML / CSS / SCSS, Bootstrap, Blade templates; cross-browser support and reusable page templates.
- ▶ Interfaces and SPAs with **Vue 3** (Pinia, Vite): the **Komek** ecosystem (CMS, CRM, chat, QR-menu, social integrations), the **Smart** mobile app.
- ▶ **StopBullying** platform (700+ commits): web portal, Electron desktop app, mobile app — layout and frontend.
- ▶ **VizitQazaqstan** and **Cinema** portals, the **Queue** ticketing system, education platforms — layout and Laravel integration.
- ▶ Gradual move towards **full-stack**: implementing features in Laravel (controllers, Blade, databases and APIs).
- ▶ Independently **owned and maintained several projects** — from tweaks to release.
- ▶ Reviewed **candidates' test assignments** for my role during team hiring.

Full-stack Developer · Freelance

2018 — Present

Palladium SMM · SMM panel

- ▶ Developed an SMM panel (social-media promotion automation) for a client. Since 2018 maintained the legacy version on native **PHP 7.4**; in 2026 **architected and built a new platform from scratch** on **PHP 8.4 + Laravel 12** — almost single-handedly. In parallel, building my **own** SMM platform on Laravel 13.
- ▶ Features: provider integrations (API, balance monitoring), orders with native **drip-feed**, payments (multiple gateways), ticketing, admin & client dashboards with analytics, an inbound API for resellers. The panel handles **~15,000 orders/month**.
- ▶ Met tight deadlines with heavy AI assistance — success driven by **deep domain and architecture knowledge**.

EDUCATION

Front-end Development (HTML / CSS / JS)

2023

Lemon.School · online course

- ▶ Professional course in web layout and JavaScript fundamentals. Certificate.
